Mumbai, Maharashtra, India

Hi NetSkope Hiring Team.

I want to be part of NetSkope, because I have used, Implemented, Created Amazing Policies and Deployed it across PAN India users and found it very Amazing Solution in the area of SASE. And now I am in Love with the product and want to be a part of this amazing journey.

I am Ashish who has been SME at SafeSquid-SWG Solution and have worked there for more than 3.5+ years, SafeSquid-SWG is a HTTP/HTTPS Proxy with amazing Content-Filtering capability, it is less known product, but with an amazing journey, features, Granular controls and in-depth HTTP(S) Protocol Control.

I was part of each aspect of the Product from Core Concept to Customer Deployment and Troubleshooting. I have worked in Deployment & Setup Part (Linux & Networking), Alpha & Beta Software & Security Testing, SWG Enterprise Policy Creation, Customer Engagement, Troubleshooting etc. I have gone through all the phases of the Solution.

I have also evaluated few Top SASE Vendors which include Prisma Access, ZScaler, Barracuda-Content Shield, Checkpoint-Harmony Connect and also NetSkope-SASE. On-Premises Solution include Sophos-XG, SonicWALL and FortiGate.

My Part was to Understand the solution thoroughly, test it with an approach to check what all controls are provided by the solution. Test it and provide a list as to where the solution is not able to provide controls or what is missing in the solution. Then deploy it on the Few Production Location, to test troubleshooting, user experience and Policy Change Response. My part was also to compare all the solutions and provide the Analysis to management team.

I am a very curious engineer which loves debugging software's and solution to understand how they work and in what situation they might not work, curios in knowing how a solution accomplished a particular Security Feature and trying to decode it.

What I am looking for is

- Part of the Cloud side architecture of the solution, I have good knowledge of AWS and Cloud Security at AWS
- Want to work with Proxy, Networking, Firewall, Security Control, Scripting, Problem Structuring and Solving.
- Want to bring in my Knowledge and Experience to use and help others with it.

Sincerely,

Ashish R Bhandari
